5

1. GENERAL

1.01 This section provides identification, installation, maintenance, and connection information for the 1702B telephone set previously contained in Sections 502-710-102 and 502-710-433 which are hereby canceled.

2. IDENTIFICATION

2.01 This set is equipped with a concealed lamp which illuminates the dial when the handset is removed. This lamp also serves as a night light under control of a slide switch located in the base at the rear of set (Fig. 2).

2.02 These sets are available in standard telephone colors. Refer to Section 500-120-100 for promoted and nonpromoted colors.

2.03 The 1702B telephone set is factory wired for individual line or 2-party flat rate service. With internal wiring changes this set may be used with other services (Table A).

Ordering Guide

2.04 *Basic Telephone Set:*

Set, Telephone, 1702B-*

2.05 *Replaceable Components:*

- P-89B4-* Housing
- Ringer, M1A
- Dial, 25P4 or 25H4 (MD) (illuminated)
- KS-19387 (GE-259) dial lamp order by KS number
- Handset, G3AR
- Cord, Handset, H4CJ-*
- Cord, Mounting, D5AK-*

* Add appropriate color suffix.

TABLE A

**LINE AND RINGER CONNECTIONS FOR BRIDGED, RING,
AND TIP PARTY SERVICE**

[] MD color code

Notes: 1. If (BK) strap is present between network terms. H and A remove from A; insulate and store.

2. To silence ringer for all classes of service remove (R) ringer lead from K of network; insulate or store on spare terminal.

3. INSTALLATION

3.01 Insofar as possible, be guided by the customer's wishes in placing apparatus. Consider the following:

- Safety for yourself, customer, and maintenance personnel.
- Availability of power outlet for 2012A transformer.
- Location of telephone set so ringer volume is adequate for area.
- General appearance of installation.

3.02 Install polarity guard (D-180229 Kit of Parts) only when specified by local instructions for end-to-end signaling.

3.03 Select a 105-120 volt ac receptacle that is not on a circuit controlled by a switch. A 2012A transformer should be used with each telephone set. A 2A clamp is available to secure this transformer to the service outlet. Current production transformers have folded-blade prongs for this purpose. For multiple installations, see section covering station transformers.

3.04 For proper illumination of the dial, the length of the wire between the transformer and the telephone set should not exceed 250 feet of standard inside wire. **Do not use a 25-foot mounting cord because of added resistance.**

Portable Installation

3.05 Jacks and plugs are available for portable installation of these telephone sets. Refer to Division 461 for selection of appropriate types.

4. MAINTENANCE

4.01 Maintenance of the 1702B telephone set is limited to replacing defective components and burnishing or adjusting line switch contacts.

4.02 Refer to sections covering dials, handsets, cords, ringers, line keys, etc., for maintenance of these components.

4.03 Housing, dial faceplates, and handsets may be cleaned with a damp KS-2423 cloth. ***Do not use scouring cleaners on colored components as this may damage finish.***
